(Boston Lisp Meeting)
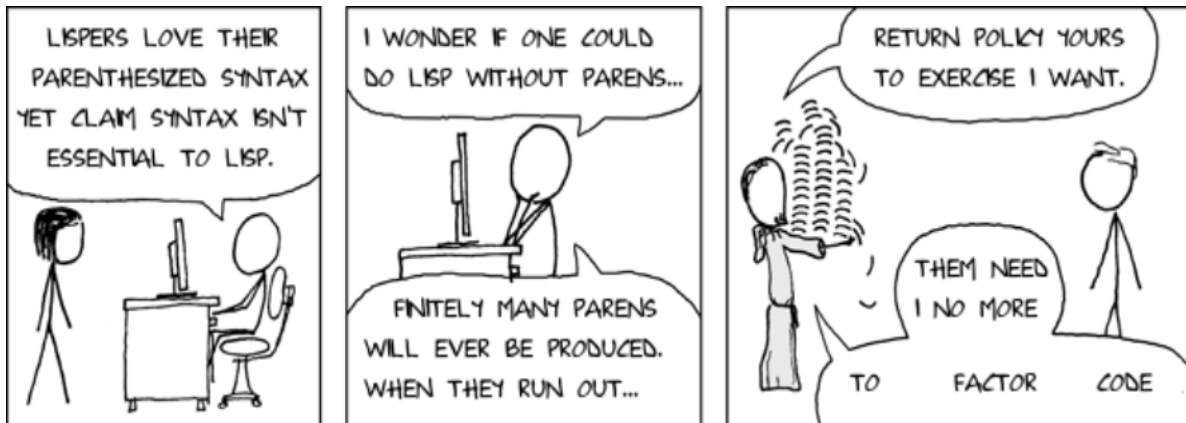

: date "**Monday July 26th 2010**" ; : time "**6pm**" ;

: location "MIT 34-401B" ;

: speaker "Slava Pestov" ;

: title "Factor: an interactive, dynamic, stack-based programming language" ;

: abstract "Factor is a new dynamically-typed language. Factor's strengths include an extensive standard library, an interactive development environment, extensive meta-programming features, efficient support for operations on packed binary data, and interoperability with C. The presentation will cover the Factor language and environment, demonstrate some interesting features, and touch upon the history and motivations behind the project." ;

: see "http://factorcode.org/" ;

: author "Slava Pestov started programming in elementary school using HyperCard, then moved on to Java. After getting a lot of useful work done in Java, he then moved on to study esoteric programming languages, and like any self-respecting language enthusiast, noticed that all existing ones were lacking and decided to write his own." ;
